## **Reducing Hospitalizations by up to 40% through Innovation, The SafetyNet Program Makes Debut**

The SafetyNet Program, the innovative solution to improved in-home safety, exclusively featured by Hummingbird Care Services, combines compassionate caregiving with state-of-the-art technology.

Committed to providing proactive holistic care that empowers seniors to live independently and comfortably at home, Hummingbird Care Services SafetyNet Program integrates continuous, behind-the-scenes support, ensuring the well-being of clients around the clock and reducing hospitalizations by up to 40%. Additional benefits feature enhanced independence and peace of mind for clients and families.

The product is a discreet, plug-and-play device, simply installed in the clients' homes, continuously analyzing for potential health issues such as falls, urinary tract infections (UTI's), medication errors and cognitive changes. When such events are detected, the care team is immediately alerted, allowing for swift and appropriate intervention.

As the guardian of one of our clients so aptly shared, "The SafetyNet Program filled the gaps we did not even know existed, checking on my client regularly and keeping our family in the loop. It gave us all incredible comfort, knowing she was in capable, caring hands." And "knowing that someone is always there...it's more than a service. It is a lifeline", relayed as even more proven testimony from a family member of another client.

Discover the impressive value first-hand through the SafetyNet Program demonstrations, that are available with advanced scheduling.
